

Experiment 1: Create a Static Home Page by using HTML Tags and Forms

Aim: The aim is to create a static home page using HTML

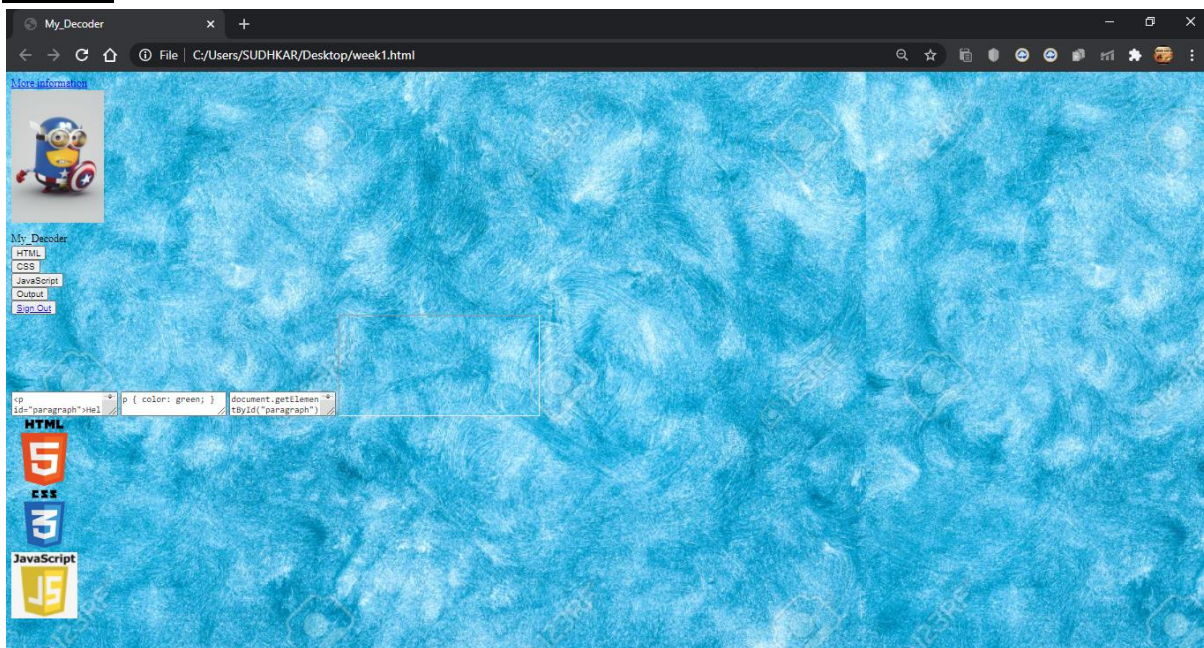

Tags Used:

<html>
<head>
<title>
<body>
<a href>

<form>
<div>
<iframe>

Implementation:

Output

Code

```
<html>  
  
  <head>  
  
    <title>My_Decoder</title>  
  
  </head>
```

```

<body style="background-image:
url('https://previews.123rf.com/images/germanopoli/germanopoli1712/germanopoli171200024/91260633-
light-blue-exposed-concrete-wall-texture-sky-effect-grunge-textures-and-backgrounds-perfect-
backgrou.jpg');">
  <a href="C:\Users\Ankita Senthil\Desktop\sem7\P-
web_lab\web_lab_project\xml_forWeb_lab\languages.xml">More information</a>
  <div id="minion">
    
    <p style="text-align:center;color:green;font-size: 15px;"></b></p>
  </div>

  <div id="square">
  <div id="header">

    <div id="logo">

      My_Decoder

    </div>

    <div id="buttonContainer">

      <div class="toggleButton active" id="html"><button>HTML</button></div>

      <div class="toggleButton" id="css"><button>CSS</button></div>

      <div class="toggleButton" id="javascript"><button>JavaScript</button></div>

      <div class="toggleButton active output"><button>Output</button></div>
      <div class="toggleButton output m-auto d-block"><button><a href="logout.php" class="btn btn-
danger m-auto">Sign Out</a></button></div>

    </div>

  </div>

  <div id="bodyContainer">

    <textarea id="htmlPanel" class="panel"><p id="paragraph">Hello World!</p></textarea>

    <textarea id="cssPanel" class="panel hidden">p { color: green; }</textarea>

    <textarea id="javascriptPanel" class="panel
hidden">document.getElementById("paragraph").innerHTML = "Hello!";</textarea>

    <iframe id="outputPanel" class="panel"></iframe>

```

```
</div>

</div>
<div class="imglogo">
  
</div>
<div class="imglogo">
  
</div>
<div class="imglogo">
  
</div>

</body>

</html>
```

Result:The experiment was successfully completed.
